

Plant Information

Common Name: Japanese Honeysuckle
Scientific Name: *Lonicera japonica*
Plant Type: Vine

Physical Characteristics

Height/Spread: 3-10 meters tall and 1.5-3 meters wide
Growth Rate: Fast
Flower Color(s): White to yellow
Foliage Color(s): Dark green
Bloom Time: Spring to summer

Plant Description

Lonicera japonica, commonly known as Japanese Honeysuckle, is a vigorous vine that adds beauty and fragrance to any garden. Its twining habit makes it perfect for covering fences, trellises, and arbors. This fast-growing plant produces white to yellow flowers that attract hummingbirds and butterflies. With dark green foliage and a lovely scent, Japanese Honeysuckle is a great addition to any landscape. It thrives in well-drained, loamy soil and can tolerate a range of sunlight conditions. Low maintenance and versatile, this vine is a popular choice for adding vertical interest and natural beauty to outdoor spaces in Canadian gardens.

Optimal Growing Requirements

Sun: Full Sun to Partial Shade

Soil: Well-drained, loamy soil

Water: Moderate Watering

Hardiness Zone(s): Zones 4-9

Maintenance & Care

Maintenance Level: Low
Potential Pests & Diseases: Aphids, powdery mildew

Additional Information

Special Features: Attracts hummingbirds and butterflies
Common Uses: Ideal for covering fences, trellises, and arbors
