

Plant Information

Common Name: Lemon Meringue
Scientific Name: Bidens ferulifolia
Plant Type: Annual

Physical Characteristics

Height/Spread: 20-30 cm tall, 30-45 cm wide
Growth Rate: Fast
Flower Color(s): Yellow
Foliage Color(s): Green
Bloom Time: Spring, Summer, Fall

Plant Description

Lemon Meringue, scientifically known as Bidens ferulifolia, is an annual plant that blooms with bright yellow flowers throughout the spring, summer, and fall. This low-maintenance plant thrives in full sun and well-draining soil, making it ideal for ground cover or container planting in Canadian gardens. With a fast growth rate and drought-tolerant nature, Lemon Meringue adds a vibrant splash of color while attracting butterflies to the garden. Keep pests like aphids and spider mites at bay, and consider planting companion flowers like marigolds and petunias to enhance the visual appeal of this beautiful plant.

Optimal Growing Requirements

Sun: Full Sun

Soil: Well-draining, fertile soil

Water: Low to Moderate Watering

Hardiness Zone(s): Zone 3-5

Maintenance & Care

Maintenance Level: Low
Potential Pests & Diseases: May attract aphids, spider mites

Additional Information

Special Features: Drought-tolerant, attracts butterflies
Common Uses: Ground cover, container plant

Notes
